## **BENEFITS** of getting vaccinated against COVID-19.

1. COVID-19 vaccines available in the United States are effective at protecting people from getting seriously ill, being hospitalized, and even dying—especially people who are boosted.
2. As with vaccines for other diseases, you are protected best when you stay up to date with the recommended number of doses and boosters.
3. COVID-19 vaccines even offer protection to people who had COVID-19, including protection against being hospitalized from a new infection.
4. COVID-19 vaccines are safe—much safer than getting COVID-19.
